

Subway building kit in HO scale

This kit includes all building parts and signs milled in white and black styrene plastic, clear window glazing, and self-adhesive decals. All parts fit together but may need light sanding in joints for cosmetic reasons. The model needs painting.

Some model building and painting skills are required.

Assembly instructions for Subway building

Thank you for buying this Dominos' Pizza building kit. Please take some time to read these instructions before you begin assembling.

This kit is milled in styrene plastic and is very easy to glue together using Plastruct Plastic Weld or similar glue products. The wall parts are tabbed and slotted for easier assembly. Take your time to identify all parts, lay them out and clean them for any burrs before gluing them together.

Walls and roof

Base, inside walls and counter

Window frames, doors and window glazing

Assembly

Start by attaching the walls to the roof as shown. The parts goes almost together, then apply the liquid glue and apply pressure to the parts to make them go all the way together.

Assemble the parts for the counter, fitting the slots and tabs.

Mount the counter to the floor.

Glue the wall pieces to the floor as shown. Glue the over-the-counter valance to the small inner roof piece.

Glue the inner roof to the walls as shown.

For best looking result, you may lightly sand the joints - corners and roof. If needed, fill with putty. Use a finer grit paper, 180 and finish with 6-800 until smooth. Now it is time to paint the building and the signs, see painting section.

After the paint has dried, mount the side door by gluing the door support (the black piece slightly larger than the door) inside the wall, then glue on the door. Leave a 0.04" lip to make room for the floor.

Mount the window glazing inside the wall, leaving a 0.04" lip on the bottom of the tall front and side windows (to leave room for the floor). Remove the "filling" inside the window frames and cut/file away the burrs, then install the window frames, this is a press fit so you do not need to glue them in. If you want to glue them in place, use Crystal Clear or a similar liquid glass product.

Painting

Paint the whole building light gray (or whatever you like). On this model I used Testors Gull Gray. For best results, give the building a coat of primer first. Paint the roof dark gray (Floquil Grimy Black). Paint the front door black.

Mount the facade sign on a piece of cardboard with double-sided tape and paint it green, I used Floquil Dark Green.

Sand away the paint on the face of the letters, using a sanding block and 120 grit sandpaper. Brush paint or use a Sharpie marker to color "way" yellow.

Cut the decals with a sharp hobby knife or a pair of scissors. Remove the backing paper using the tip of the knife to separate it from the decal. Be very careful handling the decals and touch the surfaces as little as possible

Finishing

Mount the sign on the wall using a tiny amount of white glue (or Woodland Scenics Scenic Cement). The white glue will let you move the sign until it sits right.

Mount the decals on the inside walls and windows as shown on the picture below.

You can paint the interior any color you like, I used sand on the walls, gray on the countertop and covered the floor with self-adhesive red brick paper from Micro-Mark (not included).

If you want to detail the roof with vents and airconditioners, we recommend Walthers #933-3733 Roof Details Kit.

Enjoy your Subway Restaurant on your layout.
